

CLINICAL PHARMACIST

Integration and Collaboration to Improve Patient Outcomes

In their ever-expanding role, pharmacists have become among the key members of a person-centered, team-based, care practice model, shown to improve patient and population outcomes for various chronic disease states.

Working with a pharmacist who is onsite and fully integrated into the care team brings tangible benefits to both providers and patients. Our PharmD specializes in support team care for diabetes, hypertension, asthma, dyslipidemia, and more.

- Insulin management and titration training
- Medication therapy management
- Challenging medication adjustments
- Chronic disease management
- Medication reconciliation and evaluation
- Prescription coverage problems
- Medication education and training
- Physician and pharmacist consultations
- Wellness visits and preventive services
- Telepharmacy services

Savitri, PharmD

Led by Savitri Modi, PharmD and TCPI Practice Transformation Coach, our approach builds upon years of experience providing direct coaching support to 23 Federally Qualified Health Centers and more than 70 small and solo practices through the federal Transforming Clinical Practice Initiative (TCPI).

ABOUT ELEVATION HEALTH PARTNERS

We take a people-centric approach to serve the needs of our clients through tailored solutions, forward thinking, and never settling for traditional approaches.
